

Assembling the Nutribullet Juicer

Introduction

Assembling your Nutribullet Juicer gets you ready to begin extracting fresh, nutritious juice from your favorite fruits and vegetables in just a matter of minutes.

What's Included

- 1000 Watt Motor Base with Locking Handle
- pulp Basin Cover
- 1.5L Pulp Basin
- sieve

1. Place the unplugged motor base on a dry, level countertop. Set the dial to the OFF position.

2. Place the pulp basin on top of the motor base. Align the pulp basin with the motor base so that the spout is aligned with the cleft side of the motor base.

3. Align the sieve with the motor drive spinner and push down until it clicks into place. Handle the sieve by gripping the top edges being careful not to touch the sharp blades on the base of the sieve.

4. Place the basin cover over the sieve and pulp basin.

5. Raise the locking handle to a vertical position until it locks into place on both sides of the basin cover.

To test the handle is firmly secure, move it back and forth slightly and feel for any looseness. Once the locking handle is secure, plug the motor base into a power outlet as the juicer is ready for use.

WARNING ⚠ Do not power on the juicer when the locking handle is not securely in place. Doing so may cause the juicer to malfunction.
